Name: EVANS, BUDHI  
Clinic: HILLSBOROUGH VETERINARY CLINIC  
Doctor: Meghan Taylor

Date Received By Histology Lab: 01/16/2002  
Date Collected By Veterinarian: 01/16/2002

Accession # V02-16-167

SPECIMEN SOURCE: Right lateral flank.

CLINICAL INFORMATION: Right lateral flank, a firm, amorphous tissue in subcutaneous layer but attached to body wall.

GROSS/CYTOLOGY DESCRIPTION: Received is a fatty mass with a central, firm gray tumor. The overall specimen measure .8 x 3.2 x 1.5 cm and the tumor is 1.3 cm in diameter. One section is submitted in one cassette.

MICROSCOPIC EXAM: Sections show a nodule formed by atypical spindle cells. Mitotic index is 12. There is necrosis. Tumor is surrounded by normal fatty tissue. Margins are free.

DIAGNOSIS:  
SUBCUTANEOUS LESION LEFT FLANK AREA, 2 YEAR OLD CAT:  
FIBROSARCOMA, HIGH GRADE.
